

APPENDIX 7
MOVES Input Parameters

Meteorological Data

RFP SIP revision for 2008 8-hr Ozone Standard for years 2020, 2030, 2040 and 2045.

Appendix 10: Regional data from TCEQ. HGB area weather station data averages for the 2011 June through August period developed originally for the 2011 AERR inventories, TTI, August 2012.

https://www.tceq.texas.gov/assets/public/implementation/air/sip/hgb/HGB_2016_AD_RFP/RFP/HGBRFP_Appendix_10.pdf

For the HGB region

¹ Fuel formulations developed by TTI (July 2017) using local summer fuel surveys sample data (EPA 2016 Houston RFG compliance sample data), with adjustments for expected future year regulatory effects (i.e., the average summer 2016 sulfur content value [of 29.41 ppm] was changed to 10 ppm Tier 3 standard for 2017 and later year analyses). Average RFG properties were composed of RFG grade averages (regular, mid-grade and premium) weighted by 2016 Annual Texas Prime Supplier RFG Sales Volumes (Energy Information Administration: http://www.eia.gov/dnav/pet/pet_cons_prim_dcu_stx_a.htm).

² The diesel fuel sulfur value was set consistent with the federal standard (conservatively between maximum observed from recent local surveys and average annual 15 ppm standard).
