

Appendix B: Task 3 Work Plan & Sampling Process Design and Monitoring Schedule (Plan)

Task 3: Water Quality Monitoring

Objectives: Water quality monitoring will focus on the characterization of a variety of locations and conditions. This will include a combination of the following:

- Planning and coordinating basin-wide monitoring.
- Routine, regularly scheduled monitoring to collect long-term information and support statewide assessment of water quality.
- Systematic, regularly scheduled short-term monitoring to screen water bodies for issues.
- Permit support monitoring to provide information for setting permit effluent limits; and
- Special study, intensive monitoring targeted to:
 - identify sources and causes of pollution;
 - assess priority water quality issues;
 - obtain background water quality information;
 - provide information for setting site-specific permit effluent limits; and
 - evaluate statewide, regional, and site-specific water quality standards.

Task Description: The Performing Party will coordinate and develop water quality monitoring strategies through the RMW and present strategies to the CRP Steering Committee for review and concurrence. To avoid duplication of monitoring efforts, the Performing Party will continue to coordinate monitoring efforts with other area data providers. The Performing Party also will continue to arrange regional training opportunities and workshops which support cooperative monitoring efforts (e.g., field methods, biological data collection, and habitat assessment).

The Performing Party will complete the following subtasks:

Monitoring Description – In FY2024, the Performing Party will collect quarterly samples at a minimum of twenty-one (21) water quality monitoring sites throughout the Performing Party’s service area. Sampling efforts will include basic field parameters, flow, conventional chemical parameters, and bacteria. Most sites are located in the upper portions of watersheds or watersheds that fall outside the jurisdiction of local partner agencies.

In addition to the Performing Party’s ambient monitoring program, six (6) local agencies are involved in this multi-basin monitoring effort. The Performing Party subcontracts with several entities to conduct monitoring and coordinates with others as in-kind contributors to conduct monitoring. The six participating agencies typically monitor a combined total of around 290 monitoring sites in the region (this number is subject to change based upon accessibility). Each agency’s monitoring activities will be coordinated through the RMW and coordinated monitoring process. The coordination reduces monitoring duplication and allows all local agencies to see the data collection efforts of and data availability from other local agencies. Routine monitoring is scheduled at varying frequencies, which are determined by the parameters of concern for individual streams and/or proximity to a monitoring agency’s field office and lab. Frequencies vary from quarterly for some parameters to monthly in highly impacted urban areas. Baseline monitoring will include the collection of field parameters at all sites and the collection of bacteria, flow, and conventional chemical parameters at sites where indicated. Additional details concerning the monitoring activities conducted by partner agencies are outlined in the Performing Party’s Multi-Basin QAPP.

In FY2025, the Performing Party and area partners are expected to monitor at a similar level of effort as in FY2024. The actual number of sites, location, frequency, and parameters collected for FY2025 will be based on priorities identified at the CRP Steering Committee and Coordinated Monitoring meetings and included in the amended Appendix B schedule of the Performing Party’s Multi-Basin QAPP.

All monitoring will be completed in accordance with the H-GAC Multi-Basin QAPP, the *TCEQ Surface Water Quality Monitoring Procedures, Volume 1: Physical and Chemical Monitoring Methods (RG-415)* and the *TCEQ Surface Water Quality Monitoring Procedures, Volume 2: Methods for Collecting and Analyzing Biological Assemblage and Habitat Data (RG-416)*. The Performing Party will include summaries of monitoring activities in the corresponding quarterly Progress Report.

24-Hour Dissolved Oxygen Monitoring - There are priority assessment units with dissolved oxygen impairments or concerns in the Performing Party's monitoring area. More data collection is needed to determine or verify the impairments. The Performing Party and/or sub-participants will conduct 24-hour dissolved oxygen monitoring at a minimum of seven stations, four times per year, throughout the two-year Contract period. The sites will be determined once budget is approved and site locations are coordinated and prioritized with TCEQ. The Performing Party will also include summaries of monitoring events in the corresponding quarterly progress report.

Permit Support Monitoring - During FY2024 and/or FY2025, the Performing Party may conduct monitoring activities to support TCEQ's Water Quality Division by collecting field parameters and discharge measurements at selected waterbodies identified by TCEQ. The sites will be determined once budget is approved and site locations are coordinated and prioritized with TCEQ. The Performing Party will include summaries of any activities in the corresponding quarterly Progress Report.

RMW - The RMW will meet during three of four quarters to discuss monitoring needs, problems, successes and changes. The third quarter meeting is conducted as the coordinated monitoring meeting (see below). The RMW is composed of Performing Party staff and representatives from local participating agencies, currently including Harris County Pollution Control Services, Environmental Institute of Houston, City of Houston-Health Department, City of Houston-Drinking Water Operations, Texas Research Institute for Environmental Studies, and the San Jacinto River Authority, as well as H-GAC's contract lab and TCEQ Region 12. Meeting notices will be sent to TCEQ, United States Geological Survey (USGS), Texas Parks and Wildlife, Texas Department of Health, GBEP, and other interested parties to invite input on monitoring discussions and strategies. Each agency/organization will be asked to send representatives from their field investigation staff and laboratory staff. The RMW will discuss CRP monitoring tasks and deliverables, basin monitoring priorities, training, and upcoming projects. This workgroup is designed to function as the mechanism through which data management needs and priorities are discussed. The Performing Party will include meeting summaries in the corresponding quarterly Progress Report.

RMW meeting results will be presented to the CRP Steering Committee for review and concurrence with various basin interests. This review process will be used to assess the current monitoring plan and adjust regional monitoring strategies as needed.

Coordinated Monitoring Meeting - The Performing Party will hold an annual coordinated monitoring meeting as described in the FY2024-2025 CRP Guidance. Qualified monitoring organizations will be invited to attend the working meeting in which monitoring needs and purposes will be discussed segment by segment and station by station. Information from participants and stakeholders will be used to select stations and parameters that will enhance overall water quality monitoring coverage, eliminate duplication of effort, and address basin priorities. A summary of the

changes to the monitoring schedule will be provided to the participants within two weeks of the meeting. Changes to the monitoring schedule will be entered into the statewide CMS (<http://cms.lcra.org>) and communicated to meeting attendees. Changes to monitoring schedules that occur during the year will be entered into the CMS and communicated to meeting attendees. All requirements related to meetings will be followed and required meetings will be conducted in-person or via TCEQ approved virtual format.

Monitoring Activities - Each progress report will include a description of activities including all types of monitoring performed, number of sampling events, and the types of monitoring conducted in the quarter. The Performing Party will complete and submit a monitoring activities report as an attachment to the progress report.

Special Studies - Special studies are developed, as needed, based on local stakeholder input and the results of TCEQ or the Performing Party assessments. Status reports of each special study conducted will describe activities completed during the quarter. The status reports will be submitted along with the progress report. To help keep the public and basin stakeholders informed, the Performing Party's website will be updated in a timely manner to include key elements of special studies' reports or summaries (e.g., status reports, executive summary, maps, data analysis, final reports). Special studies will be coordinated with and approved by the TCEQ project manager prior to implementation.

Special studies for the FY2024-2025 Contract biennium may include:

Site Characterizations - Review of local monitoring data indicates there are many sites throughout the region where elevated levels of bacteria or low levels of dissolved oxygen are chronic conditions. Local entities have expressed interest in determining why these chronic conditions exist. Beginning with some of the most problematic sites, the Performing Party and other CRP partners may conduct “site specific” characterizations at future locations if determined necessary by data analysis. Habitat information, field verification of land cover, and identification of potential sources of pollution will be determined. Additional monitoring data will be collected from these small sub-watersheds as needed to supply data to support TCEQ’s assessment process. Data collected during these intensive surveys may be submitted at TCEQ’s request. The Performing Party will also include summaries of any activities in the corresponding quarterly Progress Report.

A short report of approximately one to five pages in length along with photographs will be submitted following completion of each characterization assessment. The reports will be submitted to TCEQ to assist with determining the appropriate water quality strategies to be pursued. An appendix to the Multi-Basin QAPP will be developed to provide the details of these characterizations.

Deliverables and Due Dates:

September 1, 2023 through August 31, 2024

- A. Conduct water quality monitoring, submit monitoring activities report, summarize activities, and submit with progress report- December 15, 2023; March 15 and June 15, 2024
- B. RMW Meeting Notice – Two weeks in advance of RMW meetings
- C. Coordinated Monitoring Meeting - between March 15 and April 30, 2024
- D. Coordinated Monitoring Meeting Summary of Changes - within 2 weeks of the meeting
- E. Email notification that Coordinated Monitoring Schedule updates are complete - May 31, 2024
- F. Special Study Status Reports (if applicable) – December 15, 2023; March 15 and June 15, 2024
- G. Site Characterization Reports (if applicable) – coordinate due date(s) with TCEQ project manager

September 1, 2024 through August 31, 2025

- A. Conduct water quality monitoring, submit monitoring activities report, summarize activities, and submit with progress report- September 15 and December 15, 2024; March 15, June 15 and August 15, 2025
- B. RMW Meeting Notice – Two weeks in advance of RMW meetings
- C. Coordinated Monitoring Meeting - between March 15 and April 30, 2025
- D. Coordinated Monitoring Meeting Summary of Changes – within 2 weeks of the meeting
- E. Email notification that Coordinated Monitoring Schedule updates are complete - May 31, 2025
- F. Special Study Status Reports (if applicable) – September 15 and December 15, 2024; March 15, June 15, and August 15, 2025
- G. Site Characterization Reports (if applicable) – coordinate due date(s) with TCEQ Project Manager

Sample Design Rationale FY 2024

The sample design is based on the legislative intent of CRP. Under the legislation, the Basin Planning Agencies have been tasked with providing data to characterize water quality conditions in support of the Texas Water Quality Integrated Report, and to identify significant long-term water quality trends. Based on Steering Committee input, achievable water quality objectives and priorities and the identification of water quality issues are used to develop work plans which are in accord with available resources. As part of the Steering Committee process, the H-GAC coordinates closely with the TCEQ and other participants to ensure a comprehensive water monitoring strategy within the watershed. A very brief discussion of past or ongoing water quality issues are provided with each partner's section to justify the monitoring schedule.

Houston-Galveston Area Council (H-GAC):

H-GAC conducts routine monitoring at 21 sites on a quarterly basis. Flow measurements are collected at all sites whenever possible. These sites are located towards the perimeter of the region where other local partners do not monitor. These sites are located where there are no cities or communities able to conduct ambient water quality monitoring.

Nearly all current routine sites, parameters, and monitoring efforts will continue into FY24 except for site 20466 being transferred to TRIES and adding new sites 22429 and 22430 on Luce Bayou. Currently, H-GAC has three 24-hour DO sites to confirm whether there is a new or continuing 24-hour DO issue at the three sites. They are:

- Site 16675 (Unnamed Trib of Buffalo Bayou at Glenwood Cemetery – Segment 1013C_01).
- Site 16676 (Unnamed Trib of Greens Bayou at Smith Rd in Houston – Segment 1016D_01).
- Site 16475 (Robinsons Bayou at FM270 in League City – Segment 1101D_01)

Current sampling throughout the East Fork San Jacinto River watershed will continue between H-GAC, TRIES, and DWO. However, in response to new bacteria impairment on Tarkington Bayou which flows into Luce Bayou, H-GAC will be adding two new monitoring sites on Luce Bayou. TRIES will take over one existing monitoring site on Tarkington Bayou and add a new site upstream of the current. This monitoring will be in anticipation of a future TMDL project.

Harris County Pollution Control Services (HCPCS):

HCPCS staff monitor the Houston Ship channel, San Jacinto River tidal portion, side bays along the ship channel, Barbour's Cut, Clear Lake, and tributaries either monthly or every other month. Monitoring sites, parameters, and frequencies will not change in FY24.

Houston Health Department (HHD):

The city currently collects samples from 133 sites 6 times per year or approximately every other month. Staff have identified 13 shallow sites that are supposed to be only field measurements, observations, and bacteria sampling. No conventional parameters will be collected at the 13 sites. All 13 sites are part of the Bacteria Implementation Group (BIG) project area and continue to be sampled due to bacteria impairments in all of those waterways. Shallow sites include 11157, 16594, 16652, 16656, 16657, 16662, 16666, 16667, 18689, 18690, 18691, and 18692 in basin 10 plus 17487 in basin 11.

Site 11125 (Garners Bayou at North Sam Houston Pkwy) was removed last year due to safety. The site is added back to the schedule for FY24. HHD will sample from the banks only when it is safe to do so.

HHD collects TKN samples from only 25 of the 133 sites. TKN samples (no chlorophyll *a*) are collected quarterly.

Houston Drinking Water Operations (DWO):

DWO collects samples from Lake Houston and the Lake Houston watershed because Lake Houston is a drinking

water source for the region. Some sites are sampled monthly while others are sampled every other month. Twelve (12) TKN samples and three (3) chlorophyll *a* are sampled quarterly.

Station 22224 - Luce Bayou at Cry Baby Lane (segment 1002) has accessibility issues. They will continue with monthly monitoring. If the site cannot be reached for any reason, DWO will include an explanation on the data review checklist so H-GAC can include in the data summary report to TCEQ.

There will be no change to DWO sites, parameters, or frequencies.

SJRA Lake Conroe & The Woodlands

There are no changes to SJRA's sites, parameters, or frequencies during FY24.

SJRA monitors Lake Conroe at 10 sites monthly. The City of Houston DWO lab analyzes the conventional and bacteria samples. SJRA collects TKN and chlorophyll *a* samples at four (4) of the ten (10) sites quarterly.

SJRA monitors nine (9) sites in The Woodlands area. Four (4) sites are located on Lake Woodlands with TKN and chlorophyll *a* collected at one site quarterly. Field w/ sonde parameters are collected monthly with lab samples being collected quarterly. There are no TKN or chlorophyll *a* samples collected on the tributary sites.

Texas Research Institute for Environmental Studies (TRIES):

H-GAC contracts with TRIES to collect 11 sites on the East Fork San Jacinto River, Winters Bayou, and a few other small tributaries. Sites are monitored quarterly. In FY24, TRIES will add two sites on Tarkington Bayou, including a new site (22431) and a site transferred from H-GAC (20466). There will be a TKN sample collected from each of the Tarkington Bayou sites. There are no plans to change the parameters or frequency of other monitoring sites. There is new bacteria impairment for Winters Bayou in the 2022 Integrated Report (IR) as well as Tarkington Bayou. Site 21936 (Winters Bayou at SH150) was dropped from schedule in FY24.

University of Houston-Clear Lake, Environmental Institute of Houston (EIH):

EIH is contracted to collect samples in Basin 9 (Cedar Bayou), Basin 11 (Galveston and Brazoria Counties), Basin 13 (Austin, Brazoria, Colorado, Wharton, and Matagorda Counties), and Basin 24 (Bays and Estuaries). Sites are monitored on a quarterly basis. In FY24, EIH will also collect 24-hour DO at seven (7) sites quarterly to confirm whether there are new or continuing 24-hour DO issues. Those sites are:

- Site 11118 (Cedar Bayou above tidal at FM 1960 – Segment 0902)
- Site 11405 (Armand Bayou at Fairmont Parkway – Segment 1113A)
- Site 12155 (Caney Creek above tidal – 1305_03)
- Site 16564 (Lake Madeline in Galveston – Segment 2424B).
- Site 20721 (West Bernard Creek at Wharton CR 225 East – 1302B).
- Site 20723 (Mound Creek at Brazoria CR 450/ Jackson Settlement RD upstream of FM 1301 – 1302E).
- Site 21734 (Brushy Bayou at FM213 – Segment 1105E)

EIH added routine sites on Gum Tree Branch (16371) and another site on Linnville Bayou (12138). Both sites are located in Wharton County and have bacteria impairments. Sampling will update the information on the impairment. Routine monitoring was also added at Caney Creek (12155) in Matagorda County.

Monitoring dropped for FY24 was site 22232 (Cotton Bayou) BS & RT monitoring, sites 11490 (Oyster Bayou) and 21079 (Cary Bayou) BS only sites, site 18636 (Marys Creek) RT monitoring only, and site 17085 (Chocolate Bay) RT monitoring.

Site Selection Criteria

This data collection effort involves monitoring routine water quality using procedures that are consistent with the TCEQ SWQM program. Some general guidelines are followed when selecting sampling sites, as outlined below, and discussed thoroughly in SWQM Procedures, Volumes I and II. Overall consideration is given to accessibility and safety. All monitoring activities have been developed in coordination with the CRP Steering Committee and with the TCEQ. The site selection criteria specified are those the TCEQ would like considered to produce data which is complementary to that collected by the state and which may be used in assessments, etc.

1. Locate stream sites so that samples can be safely collected from the centroid of flow. Centroid is defined as the midpoint of that portion of stream width which contains 50 percent of the total flow. If multiple potential sites on a stream segment are appropriate for monitoring, choose one that would best represent the water body, and not a site that displays unusual conditions or contaminant source(s). Avoid backwater areas or eddies when selecting a stream site.
2. At a minimum for reservoirs, locate sites near the dam (reservoirs) and in the major arms. Larger reservoirs might also include stations in the middle and upper (riverine) areas. Select sites that best represent the water body by avoiding coves and back water areas. A single monitoring site is considered representative of 25 percent of the total reservoir acres, but not more than 5,120 acres.
3. Monitoring sites are selected to maximize stream coverage or basin coverage. Very long segments may require more stations. As a rule of thumb, stream segments between 25 and 50 miles long require two stations, and longer than 50 miles require three or more depending on the existence of areas with significantly different sources of contamination or potential water quality concerns. Major hydrological features, such as the confluence of a major tributary or an instream dam, may also limit the spatial extent of an assessment based on one station.
4. Because historical water quality data can be very useful in assessing use attainment or impairment, it may be best to use sites that are on current or past monitoring schedules.
5. All classified segments (including reservoirs) should have at least one Monitoring site that adequately characterizes the water body, and monitoring should be coordinated with the TCEQ or other qualified monitoring entities reporting routine data to TCEQ.
6. Monitoring sites may be selected to bracket sources of pollution, influence of tributaries, changes in land uses, and hydrological modifications.
7. Sites should be accessible. When possible, stream sites should have a USGS or IBWC stream flow gauge. If not, it should be possible to conduct flow measurement during routine visits.

Monitoring Sites for FY 2024

Monitoring Tables for FY2024 are presented on the following pages. This monitoring table is modified annually.

Monitoring Sites for FY 2024

Table B1.1 Sample Design and Schedule, FY 2024

| Site Description | Station ID | Water-body ID | Basin | Region | SE | CE | MT | Field | Conv | Bacteria | Flow | 24 hr DO | TKN | Chloro-phyll a | Comments |
|---|------------|---------------|-------|--------|----|----|----|-------|------|----------|------|----------|-----|----------------|---|
| ROBINSONS BAYOU AT FM270 IN LEAGUE CITY | 16475 | 1101D | 11 | 12 | HG | HG | BS | | | | | 4 | | | Added in FY23; continue in FY24. |
| UNNAMED TRIB OF BUFFALO BAYOU AT GLENWOOD CEMETARY RD 160 M W OF INTERSECT OF LUBBOCK ST AND SAWYER ST IN CENTRAL HOUSTON | 16675 | 1013C | 10 | 12 | HG | HG | BS | | | | 4 | 4 | | | Added in FY22; Continue in FY24. |
| UNNAMED TRIB OF GREENS BAYOU AT SMITH ROAD, HOUSTON | 16676 | 1016D | 10 | 12 | HG | HG | BS | | | | 4 | 4 | | | Added in FY23; Continue in FY24 |
| CEDAR BAYOU ABOVE TIDAL 30 METERS DOWNSTREAM OF FM 1942 AT EAST BANK | 11118 | 0902 | 9 | 12 | HG | UI | BS | | | | 4 | 4 | | | Added in FY24; |
| ARMAND BAYOU AT FAIRMONT PARKWAY ALONG MEDIAN AT MIDPOINT BETWEEN BRIDGES | 11405 | 1113A | 11 | 12 | HG | UI | BS | | | | 4 | 4 | | | Added in FY22; Transferred to UI in FY23; |
| CANEY CREEK ABOVE TIDAL 35 M DOWNSTREAM OF ASHWOOD RD/FM 3156 1.24 KM SOUTHWEST OF MATAGORDA CR 1728 ASHWOOD | 12155 | 1305 | 13 | 12 | HG | UI | BS | | | | 4 | 4 | | | Added in FY24; |
